We are Mizetto

At Mizetto we're all about creative collaborations and forms that inspire dialogue, user interaction and creativity. At the heart of our brand is multiple constellations of designers, architects and other creatives working towards the goal of achieving locally produced items with a low environmental footprint. This is possible due to in-house production of all wooden elements, few and short ways of transportation, minimal amounts of packaging, as well as hand-picked producers within a radius of 15 kilometers. If our history has taught us anything, it is to keep things local.

Our history and culture, from where we live to how we work, is crucial in our ambition to introduce Mizetto's products internationally. With our playful, flexible, and accessible design, we hope to inspire and influence how working environments are designed and planned around the globe. Mizetto's design stems from innovation, and a tantalizing blend of curiosity and passion for our ever-changing needs.

At Mizetto we specialize in office products. Always with a splash of color as we have playful attitude both when it comes to design as well as work.

“As a company, you have the opportunity to ensure that your waste is treated in the most responsible way. In many cases, waste is a valuable resource, and during treatment it must therefore be considered whether the waste can be prepared for recycling or

Trash talk

We do not compromise, we firmly believe that in order to succeed well with waste sorting in a public environment, the vessels must be appealing and be given the center stage. No one should have to interpret or find their way to source sorting.

Our ambition is to be the market leader when it comes to delivering unassuming products with a lot of character. Timelessly designed vessels that can withstand the test of time.

For a greener future, all companies must strengthen their green profile and show that they are at the forefront when it comes to recycling. An investment in designed recycling bins is an investment in the future.

Form, never conform.

Pelican

Pelican is a practical must-have turned into a decorative object and eye-catcher.

This pedal bin with touchless interaction is a series of recycle urns for the modern office that doesn't compromise with taste nor the environment.

Pelican comes in two sizes and a variety of colors. Its minimalistic design and modular shape work both as a solitary piece, as well as combined in a group of two or more.

Placed back-to-back they become an oval shape and placed in a row against a wall they form a cloud-like organic shape.

Its refined character makes the bin suitable both for the domestic environment as well as a larger recycling station in public spaces and offices.

Bin There

Take out your trash with style.

Bin There is the elegant and mobile way to handle waste at the office. Two cylindrical containers are placed on a metal tray, gracefully held in place by a thin metal frame. The bins are available in three heights and the trolley in two sizes, Small and Large. Handles and containers both have crafted details in natural tanned leather from Tärnköping and wooden lids.

The containers are both functional and beautiful on their own, for example as flowerpots. The trolley and bins have a slightly rough lacquered finish and come in the colors Olive Green, Copper Brown, Antracit, Signal White and Beige.

Arkityp, Arkiv &Arkad

Arkad is together with Arkiv and Arkityp part of an elegant product series for waste disposal, perfectly adapted to stand together, or alone. The aesthetic is based on the archetype waste bin, but with playful and thoughtful details added. Typical function with atypical shape.

Arkad is the most minimal in shape and comes without handles. The bins are often placed on a wooden base as a duo or trio. Like its sibling Arkiv it comes with a variety of add-ons, like symbols and texts in different languages, as well as lids for recycling and paper. It's available in Signal White, Antracit, Terracotta, Pale Green, Latte and Deep Burgundy, with a volume of 100 liters or about 26 gallons. The finish is slightly roughened lacquered metallic with a matte finish.

Exhibit

Playfully pleasing center piece.

Exhibit gives the hidden and undesired a central and attractive position. Sorting with artistic pride and well-preserved childishness.

With equal parts humor and seriousness, Exhibit highlights the sorting as if it is in the finest art exhibition. Here, both the playfulness and the environmental consideration, are the focal points. Why not curate your own environmental exhibition in the middle of the room, with your units at the exact throwing-distance?

Design: ADDI

Made in Sweden

Evolution

Sustainable recycling for the planet and your needs. A Recycling station will only benefit when used. The Evolution series can be combined to suit both users and the environment, day after day, year after year.

Recycling is obvious to us and an important part of minimizing our footprints. Environmental consideration is also a given part of the modern and sustainable office.

The modules in Evolution contain different waste containers- from small containers to 190-liter return vessels. Together, we make sure that everything from aluminum foil to bubble plastic can be sorted and recycled. Every office has its needs, and we have the solution for you.

Design: Mizetto

Made in Sweden

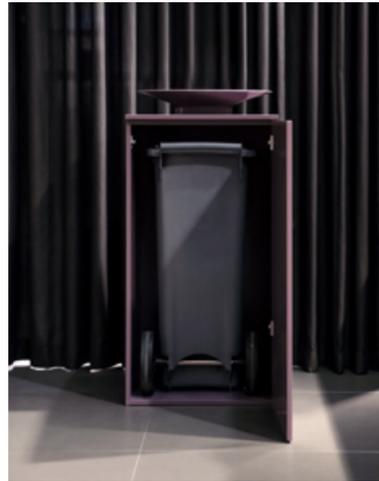

Canteen

Flexible solutions small and large canteens.

The lunch room is often the natural gathering place in many offices.

We offer both large and small vessels to meet the needs of different types of workplaces.

Fuelled by passion and unceasing curiosity, we create innovative design that responds to people's ever-changing needs.

“Everything is in constant motion. New starting point, changing needs, new paths to the goal. Every day gives new opportunities. Function that moves with you. Wherever you go, we go.”
